CONTENTS OF VOLUME XXIV

CXXX. JANUARY, 1907

On the Coefficient of Expansion of Fused Quartz. HOWARD D. MINCHIN . . 1

On the Magnetic Susceptibility and Temperature Coefficients of Cu_4SO and $MgSO_4$ Solutions. CLARENCE K. STUDLEY 22

Magnetic Susceptibility of Mixtures of Solutions. H. W. MARCH 29

A New Type of Alternating Current Galvanometer of High Sensibility. W. S. FRANKLIN and L. A. FREUDENBERGER 37

The Vapor Pressure of Carbonic Acid at Low Temperatures. JOHN ZELENY and ROY H. SMITH 42

The Spark Discharge in Gases and Vapors. JOHN E. ALMY 50

The Capacity and Resistance of Aluminium Films. C. MCCHEYNE GORDON . 60

Infra-red Emission Spectrum of Burning Carbon Disulphide. W. W. COBLENTZ 72

On the Ionization of Fused Salts. H. M. GOODWIN and H. A. WENTWORTH . 77

Energy Necessary to Ionize a Molecule by Impact. BERGEN DAVIS 93

Three-Color Interference Pictures. HERBERT E. IVES 103

The Absorption of Alpha Rays in Gases and Vapors. E. P. ADAMS 108

American Physical Society: 115

Minutes of the Thirty-fourth Meeting; Discharge of Electrons under the Influence of Ultra-violet Light, *R. A. Millikan* and *George Winchester;* The Effect of Temperature on Meta lic Spectra, *H. G. Gale;* Standard Cells, *K. E. Guthe* and *C. L. von Ende;* The Bridge Method for Comparison of Condensers, *F. E. Kester;* The Temperature of the Moon, *W. W. Coblentz;* The Temperature of the Moon, *Frank W. Very;* Heat of Dilution, *F. L. Bishop;* The Relation between Uranium and Radium, *Herbert N. McCoy* and *W. H. Ross;* An Inanimate Demon, *Albert B. Porter;* On Multiple Crossed Gratings, *Albert B. Porter;* The Determination of Electrolytic Resistance and Capacity, *A. Hoyt Taylor;* An Experimental Gyroscope for Quantitative Work, *F. E. Kester.*

CXXXI. FEBRUARY, 1907

The Latent Heat of Recalescence in Iron and Steel. F. K. BAILEY 129

Experiments on Resonance in Wireless Telegraph Circuits. Part V. GEORGE W. PIERCE 152

The Transformation into an Electric Current of Radiation Incident on a Moving Surface. BERGEN DAVIS 181

The Elastic Modulus for Small Loads at the Elastic Limit. HENRY W. BEARCE 191

Index of Refraction and Dispersion with the Interferometer. C. A. PROCTOR 195

The Luminous Equivalent of Radiation. P. G. NUTTING 202

Standard Cells. K. E. GUTHE and C. L. VON ENDE 214

An Optical Device for Deflection Instruments. EDWIN F. NORTHRUP 222

Theory of the Electrodeless Ring Discharge. BERGEN DAVIS 224

American Physical Society: 227

Minutes of the Thirty-fifth Meeting; On Effects of the Electrical Discharge on the Acetylene Flame, *C. F. Lorenz;* The Radiation Constants and Temperature of the Nernst Glower, *C. E. Mendenhall* and *L. R. Ingersoll;* Change of Phase due to the Passage of Electric Waves through Thin Films, and the Index of Refraction of Water for such Waves, *William R. Blair;* On the Magnetic Behavior of Certain Alloys of Nickel, *Bruce V. Hill;* The Viscosity of Water at Low Rates of Shear, *Lawrence E. Gurney;* On Distribution of Nuclei and Ions in Dust-free Air, *Carl Barus;* On the Variation of the Heat of Mixture with Concentration and Temperature, *B. M. Clark;* The Constants in Gas-Viscosity, *Willard J. Fisher;* Remarkable Optical Properties of Carborundum, *Lewis E. Jewell;* The Mutual Inductance of a Circle and a Coaxial Helix. The Lorenz Experiment and the Ayrton-Jones Absolute Electrodynamometer, *E. B. Rosa;* Mutual Inductances for Laboratory Use, *E. B. Rosa;* The Mutual Inductance of two Coaxial Coils, *E. B. Rosa;* Modes Illustrating the Motion of a Violin String, *H. N. Davis;* The Motion of a Violin String under Light Bowing, *H. N. Davis;* On Magnetic Shielding, *A. P. Wills;* A Color Mixer, *A. B. Porter;* On the Nature of Optical Images, *A. B. Porter;* The Absorption of Solids for Light of Short Wave-Length, *Theodore Lyman;* On the Conductivity of the Air caused by Certain Compounds during Temperature Change, *F. C. Gates;* The Transmission of Röntgen Rays through Metallic Sheets, *J. M. Adams;* The Magnetic Properties of Heusler's Alloys, *J. C. McLennan;* Geometrical Theory of Radiating Surfaces with Discussion of Light Tubes, *E. P. Hyde;* The Electrode Equilibrium of the Standard Cell, *F. A. Wolff* and *C. E. Waters;* The Standard Cell, *F. A. Wolff* and *C. E. Waters.*

303510

CXXXII. MARCH, 1907

Modifications of Maxwell-Rayleigh and the Anderson Methods for the Measurement of the Coefficient of Self-induction. ANTHONY ZELENY 257
The Absorption of Hydrogen by Metal Films. WALTER HEALD 269
On the Susceptibility of Mixtures of Salt Solutions. J. C. MCLENNAN and C. S. WRIGHT 276
Researches on the Forms and Stability of Aëroplanes. W. R. TURNBULL, M.E. 285
On the Nature of Optical Images. A. B. PORTER 303
Radiation from Selectively Reflecting Bodies. W. W. COBLENTZ 307

CXXXIII. APRIL, 1907

On the Magnetic Behavior of Certain Nickel Alloys. BRUCE V. HILL 321
Rotation and Elliptic Polarization produced by Iron Films in a Magnetic Field. W. D. HARRIS 337
The Percentage Bridge. A. C. LONGDEN 349
A Spectrophotometric Study of the Absorption and Fluorescence of Resorufin. FRANCES G. WICK 356
American Physical Society:
Minutes of the Thirty-sixth meeting. Note on the Fluorescence of Sodium Vapor, *E. Merritt;* The Hissing Point of the Metallic Arc, *W. G. Cady;* The Equations of the Fog Chamber, *Carl Barus.* 397

CXXXIV. MAY, 1907

The Temperature Coefficients of Gas Viscosity. W. J. FISHER 385
A Method for the Determination of Electrolytic Resistance and Capacity, using Alternating Currents. A. H. TAYLOR 402
Fluorescence Absorption in Resorufin. FRANCES G. WICK 407
Reflection and Transmission of Electric Waves by Resonator Gratings. C. SCHAEFER 421
The Effect of a Transverse Magnetic Field on Metallic Resistance. E. P. ADAMS 428
A Hydraulic Analogy of Radiating Bodies for Illustrating the Luminosity of the Welsbach Mantle. R. W. WOOD 436
On the Establishment of the High Temperature Scale. C. W. WAIDNER and G. K. BURGESS 441
The Vapor Pressure of Solid Carbonic Acid. H. DU BOIS 445
Proceedings of the American Physical Society:
Note on the Hissing Metallic Arc, *W. G. Cady;* The Temperature of the Mercury Arc, *Chas. T. Knipp;* On the Current Carried by Canal Rays in a Discharge Tube, *C. C. Perry.* 446

CXXXV. JUNE, 1907

Frontispiece. DeWitt Bristol Brace.
On the Magnetic Properties of Heusler's Alloys. J. C. MCLENNAN 449
Some Newly Observed Manifestations of Forces in the Interior of an Electric Conductor. EDWIN F. NORTHRUP 474
The Determination of Potential by Carbon Pencils. C. D. CHILD 498
The High Resistance Contract Thermo-electric Detector for Electric Waves. L. W. AUSTIN 508
Upon the Chemical Nature of the Radium Emanation. L. M. DENNIS and L. F. HAWLEY 511
The Scientific Work of DeWitt Bristol Brace. EDWARD L. NICHOLS 515
American Physical Society: 522
Minutes of the Thirty-Seventh Meeting; Treasurer's Report, *William Hallock;* The Physical Nature of Meteor Trains, *C. C. Trowbridge;* On Atmospheric Currents above Fifty Miles from the Surface of the Earth, *C. C. Trowbridge;* Calibration of Calorimetric Platinum Resistance Thermometers, *H. C. Dickinson* and *E. F. Mueller;* Absorption and Emission Spectra of the Salts of Neodymium and Erbium, *J. A. Anderson;* The Change of Phase due to the Passage of Electromagnetic Waves through Thin Plates and the Index of Refraction of Water for such Waves with Applications to the Optics of Thin Films and Prisms, Part 2, *William R. Blair;* Some New Measurements with the Gas Thermometer, *J. K. Clement;* Some Effects of Heavy Pressures on Arc Spectra, *W. J. Humphreys;* An Apparatus for the Production of a Rotating Electric Arc under Heavy Pressure, *W. J. Humphreys;* The Operation of a Direct Current Shunt Wound Motor in Synchronism with a Tuning Fork. *R. H. Hough and F. Wenner;* The Fluorescence, Absorption, and Magnetic Rotation Spectra of Potassium Vapor, *T. S. Carter;* The Mutual Inductance of Coaxial Solenoids, *E. B. Rosa* and *Louis Cohen.*
